Method Details

Skip to the section that relates to your option above for "Preferred receiving method".

Method One:

What is the automated response message to send back? (max 160 characters)

Method Two:

What is the automated response message to send back? (max 160 characters)

What is the email address that will receive message notifications?

Method Three:

What is the automated response message to send back? (max 160 characters)

What is the URL that should receive the initial message information via an API call?

The TNZ Group API uses default variables "number" (mobile phone number) and "message" (the actual TXT content). If you need different variables supplied, list them here:

We have three available APIs. Which would you prefer?

Tick	API
	HTTP Post
	SOAP
	GET

Once your system receives the API call, it must respond with "OK".

Method Four:

What is the URL that should receive the initial message information via an API call?

The TNZ Group API uses default variables "number" (mobile phone number) and "message" (the actual TXT content). If you need different variables supplied, list them here:

We have three available APIs. Which would you prefer?

Tick	API
<input type="checkbox"/>	HTTP Post
<input type="checkbox"/>	SOAP
<input type="checkbox"/>	GET

Once your system receives the API call, it should respond with the reply message to send back. We will then respond with "OK".

Method Five:

What is the URL that should receive the initial message information via an API call?

The TNZ Group API uses default variables "number" (mobile phone number) and "message" (the actual TXT content). If you need different variables supplied, list them here:

We have three available APIs. Which would you prefer?

Tick	API
	HTTP Post
	SOAP
	GET

What is the URL that should be sending the reply message?
